CRISTOPHER ALEXANDER REYES PORTILLO

Backend Software Engineer · Banking Systems · .NET · NestJS · Oracle · OpenShift

reyescristop@gmail.com · +502 5633 1353 · linkedin.com/in/cristopherrp · github.com/CristopherReyesP · Portfolio · Guatemala (GMT-6, overlaps US business hours) · Open to remote work

Summary

Backend Software Engineer with 5+ years of experience designing, building and deploying RESTful APIs and microservices, most recently for mission-critical banking systems. Specialized in .NET (C#), NestJS and Oracle Database in high-availability environments subject to financial regulatory compliance. Experienced in SQL query optimization, legacy system modernization, zero-downtime migrations, CI/CD pipelines on OpenShift/Kubernetes, and coordinating with QA, stakeholders and external vendors.

Experience

Backend Software Engineer (Technical Analyst I) — BANTRAB (Banco de los Trabajadores)

April 2024 – Present · Guatemala

- Develop and maintain 18+ backend microservices in NestJS and .NET (C#) that process banking transactions for mobile and web channels under high-availability and regulatory requirements.
- Migrated Keycloak from v11 to v19 (WildFly to Quarkus) on OpenShift, with legacy URL redirects and rollback runbooks: zero downtime.
- Progressively modernized Oracle PL/SQL stored procedures into domain-driven (DDD) NestJS and .NET microservices orchestrated through an API Gateway.
- Implemented progressive monolith-to-microservices routing in the API Gateway: a database-backed catalog of 38 routes, per-agent switching, legacy as the default target, and rollback without redeploy by removing the assignment.
- Resolved inconsistent reversals across distributed transactions (Saga pattern).
- Optimized complex Oracle SQL queries and stored procedures through indexing and query refactoring on critical transactional endpoints.
- Deploy containerized services to OpenShift with CI/CD pipelines for builds, tests and production releases.
- Work with stakeholders, QA and external vendors on requirements, end-to-end testing, code review and technical documentation (API specs, database schemas and runbooks).

Software Developer — OneSolutions

May 2021 – July 2021 · Guatemala

- Built and supported billing and reporting modules for an enterprise platform using SQL Server and .NET.
- Fixed production bugs and optimized queries in high-volume transactional flows.

Freelance Backend Developer — Self-employed

February 2021 – Present · Remote

- Voter census for a municipal election campaign in Mexico (Node.js, Express, MongoDB, JWT, Socket.IO, AWS EC2); the client rehired me in 2024.
- Cobros: a desktop billing system sold to a client; a single .exe built with Go, embedded React and SQLite.

Technical Skills

- **Languages & frameworks:** C#, .NET Framework, .NET Core, NestJS, Node.js, TypeScript, JavaScript
- **Databases:** Oracle Database, PL/SQL, SQL Server, PostgreSQL, TypeORM, query optimization, stored procedures
- **APIs & architecture:** RESTful APIs, API Gateway, microservices, DDD, Saga pattern
- **DevOps & infrastructure:** OpenShift, Kubernetes, Docker, IIS, CI/CD, Git, Jenkins
- **Security & IAM:** Keycloak, OAuth 2.0, RBAC, JWT
- **Practices:** Agile, Scrum, code review, technical documentation

Education

B.S. in Information Systems and Computer Science Engineering — Universidad Mariano Gálvez de Guatemala · Currently in the 10th semester.

High School Diploma in Business Administration (Perito en Administración de Empresas) — Instituto José Rodríguez Cerna

Languages

Spanish: native · **English:** intermediate (B1–B2) — technical documentation, API specifications, code review and professional communication
